

"Building a Safer Place to Work"

January 4, 2010

ABC Corporate Office

EXAMPLE

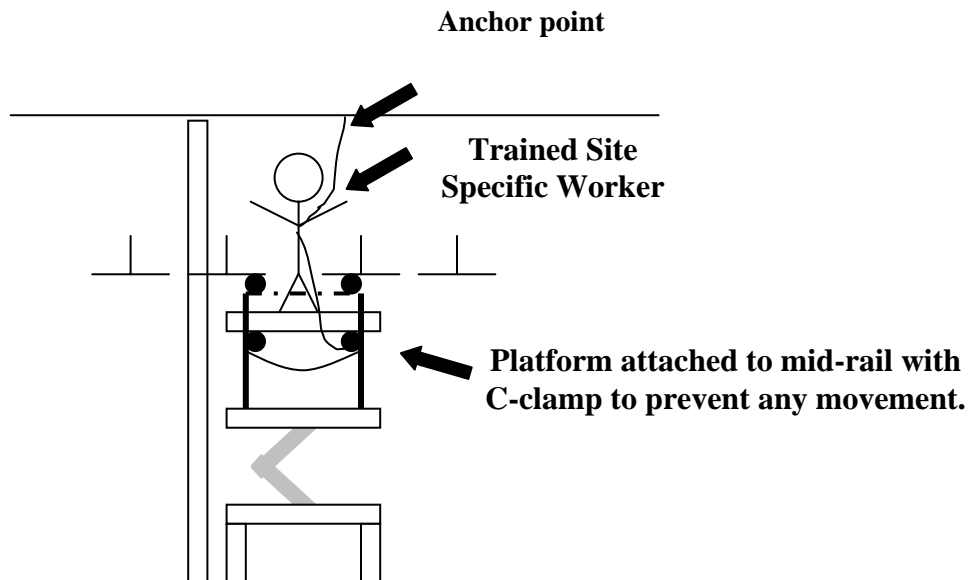

Remodel Phase

SAMPLE Site Specific Safety Program

The plumbing/sprinkler/duct work is currently at 10' and Olympic workers need to get to the deck at 13'. Due to this situation, we need to create a safe work-platform to put our work into place.

Olympic designed a platform that we secured on the mid-rails of a TM12 scissors lift. Once in position, the worker will step onto the platform and be able to do the work between other obstructions. The worker will step off the platform onto the deck of the unit to move to a new spot. Whenever there is an anchoring point, the worker will attach their fall protection at that time.

Before any worker is allowed to perform this task, on-site training will be completed and documented. Any worker caught altering this site plan will be removed from the site.
